Volume 3

Geomicrobiology Journal

An International Journal of Geomicrobiology and Microbial Biogeochemistry

Henry L. Ehrlich, *Editor*

Crane Russak • *New York*

The appearance of the code at the bottom of the first page of each article in this Journal indicates the copyright owner's consent that a single copy of the article may be made for personal use. This consent is given on the condition that for multiple copies the copier pay a fee of $2.00 per copy through the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale.

Geomicrobiology Journal

ISSN: 0149-0451

Published by Crane, Russak & Company, Inc.
3 East 44th Street, New York, New York, 10017

Volume 3, 1983–1984 (4 issues)
Subscription price for Volume 3: $60.00 plus postage and handling.
Single copy price: $16.00 plus postage and handling.

Personal subscriptions, payable by personal check and mailed to home address, are available at a reduced price to subscribers in North America only.
Please write to the Journals Manager for information.

Copyright © 1984 Crane, Russak & Company, Inc.

No part of this publication may be stored in an electronic retrieval system or transmitted electronically without the prior written permission of the publisher.

Subscription orders and notification about change of address should be sent to the office of the publisher.

Claims for missing numbers will be honored only four months from date of issue.

A microform edition of this journal is available to all subscribers from University Microfilms International, Ann Arbor, Michigan 48106

In Japan, Crane Russak Journals are distributed exclusively by Kinokuniya, Tokyo.

Instructions to Authors

Manuscripts. Manuscripts should be submitted to one of the following: Henry L. Ehrlich, Department of Biology, Rensselaer Polytechnic Institute, Troy, N.Y. 12181, U.S.A.; Wolfgang E. Krumbein, Geomicrobiology Division, University of Oldenburg, P.O. Box 25 03, D-2900 Oldenburg, Fed. Rep. of Germany; or Philip A. Trudinger, Baas Becking Geobiological Research Laboratory, P.O. Box 378, Canberra City, A.C.T. 2601, Australia. Papers, all or portions of which have been or will be published elsewhere, are not acceptable for publication in this Journal.

Manuscripts should deal directly or peripherally with geomicrobiology. Thus, papers which deal with micropaleontology, microbial biogeochemistry (cycling of matter, energy flow, etc.) or microbial ecology (interrelations of microbes and their environment) will be acceptable as long as the relation to geomicrobiology (microbial role in geologically important processes, past and present) is clear. Acceptable papers are not restricted to field studies. Laboratory findings on the biochemistry and physiology of geomicrobially active organisms will be favorably considered as long as the authors point out the relevance of their findings to geomicrobiology.

Short Letters-to-the-Editor and occasional review articles (no more than one per volume) will be considered for publication. Book reviews will be solicited by the editors.

Copyright. In conformance with copyright laws, authors will be required to sign a "copyright transfer agreement" upon acceptance of their manuscript for publication in this Journal. The agreement form will be included in the letter of acceptance to the submitting author. The agreement will protect the authors against misappropriation of their published work.

Form. Submit an original and two copies in English on good quality paper about 21 x 29 cm in size. *Type the text, references, legends, footnotes, abstract, and tables double-spaced, the latter two on separate sheets.* It is important to leave a margin of at least 25 mm all around on each page. Nothing should be underlined except generic and species names and secondary subtitles.

Abstract. An abstract, not to exceed 250 words, should precede the introduction. Do not include references or unfamiliar abbreviations or symbols.

Editorial Style. Be guided by papers in this Journal and the Council of Biological Editors (CBE) Style Manual. Follow Webster's International Unabridged Dictionary as the authority for spelling and hyphenation of words. Avoid breaking words at the end of lines. Système Internationale (SI) or modern metric units are used. Non-standard abbreviations should be defined at first mention. Standard abbreviations (refer to CBE Manual) do not require definition.

Figures. Graph and charts should be prepared in a consistent style, including lettering and numbering. They should be cleanly drawn with India ink on hard-surface paper or supplied in the form of good quality glossy prints. They should be no larger than 21 x 30 cm. The lettering should be large and clear enough to be legible when reduced by as much as 4x or to a width of 5.5 cm. Photographs should be sharp and glossy prints and no larger than 21 x 30 cm, including margins. On the back of photographs, graphs, and drawings, write in pencil the author(s) name(s) and the figure number; also indicate "top." Whenever appropriate, indicate magnification or size of a photograph with a scale line; otherwise give the magnification in the legend. Legends for figures should be typed on a separate sheet, quadruple-spaced between legends. Abbreviate Fig.

Tables. Each table should have a brief descriptive title. Do not include ex-

planatory material in titles; use footnotes, keyed with lower case letters at the bottom of the table. Use no vertical rules and underscore nothing that is not to be printed in italics. Horizontal rules should be placed one-half space or more below a typed line. Define all data in column heads with appropriate units or descriptions. Explanations can be given in footnotes keyed with lower case letters. Plan your tables to be no wider than 66 characters, including spaces, or 11 cm wide when printed.

Title Page. Short titles beginning with words that identify the subject are preferred for indexing and information retrieval purposes. The title page should include the name(s) of author(s), professional affiliation, and the complete address of the author to whom correspondence and proofs should be sent. If the title exceeds 45 letters, provide a shorter running head.

References. Literature citations in the text should be by author(s) and year. A complete listing in alphabetical order should appear at the end of the text. Titles of journals should be abbreviated according to the International List of Periodical Title Word Abbreviations (or see list in Chemical Abstracts Service Source Index, CASSI). Exclude from this listing reference to theses, abstracts, unpublished data, personal communications, and manuscripts in preparation, submitted for publication, or in press. Reference to such sources should appear parenthetically in the text. Examples of reference citations follow.

Cloud, P. 1965. Significance of the Gunflint (Precambrian) microflora. Science 148:27-45.

Dockins, W. S., G. J. Olsen, G. A. McFeters, and S. C. Turbak. 1980. Dissimilatory bacterial sulfate reduction in Montana groundwaters. Geomicrobiol. J. 2:83-98.

Fenchel, T., and T. H. Blackburn. 1979. Bacteria and mineral cycling. Academic Press, London, 225 p.

Gunkel, W. 1970. Light, bacteria, fungi and blue-green algae, p. 103-124. *In* O. Kinne (ed.), Marine Ecology, Vol. I, Part I. Wiley, London.

Page charges. No page charges are assessed.

Reprints. A total of 25 reprints will be supplied free of charge. Additional copies may be ordered at charges shown in the price scale to be sent to the author with copyedited manuscript.

Seabed Minerals Series

Published in cooperation with the United Nations

A major new series of nine volumes examining the development of manganese nodule resources, the deep-sea minerals which are the most promising new source of cobalt, manganese, nickel, copper, molybdenum, and titanium.

Volumes Now Available

VOLUME 1: *Assessment of Manganese Nodule Resources*

VOLUME 2: *Analysis of Exploration and Mining Technology for Manganese Nodules*

VOLUME 3: *Analysis of Processing Technology for Manganese Nodules*

1983 **100 pages** ***(per volume)*** **$26.00** ***(per volume)***

Forthcoming Volumes

VOLUME 4: *Delineation of Mine Site and Potential in Different Sea Areas*

VOLUME 5: *Selection of Sites for Nodule Processing Plants*

VOLUME 6: *Financial Analysis of a Manganese Nodule Mining Venture: A Balance Sheet*

VOLUME 7: *Economics of Lateritic Nickel Production in Developing Countries*

VOLUME 8: *Regulatory Framework for Manganese Nodule Development*

VOLUME 9: *Review of Activities of International Consortia and Other Public and Private Entities*

1983-1984 **100 pages** ***(per volume)*** **$26.00** ***(per volume)***
